LISTEN / NOTIFY

connnection 1:

`LISTEN test;`

connection 2:

`NOTIFY test;`

connection 1:

awakened

`Asynchronous notification "virtual" received from server process with PID 8448.`

```python
import select
import psycopg2
import psycopg2.extensions

conn = psycopg2.connect(DSN)

curs = conn.cursor()
curs.execute("LISTEN test;")

print "Waiting for notifications on channel 'test'"
while 1:
    if select.select([conn],[],[],5) == ([],[],[]):
        print "Timeout"
    else:
        conn.poll()
        while conn.notifies:
            notify = conn.notifies.pop()
            print "Got NOTIFY:", notify.channel, notify.payload
```
